Congratulations on the purchase of your Bubble Tube!

It has been designed to provide many, many years of trouble-free use. However, it is necessary to properly maintain your bubble tube for maximum life.

Without proper maintenance, the life span of the bubble tube can be greatly shortened. This maintenance log is a critical part of maintaining the warranty on your bubble tube, without which your warranty may be voided.
Cleaning and Maintenance
The unit (exterior base) should be cleaned with a damp soft cloth. A non-abrasive cleaning agent may be used for stubborn stains. Be sure no liquid enters the base of the unit. Use only a damp, soft cloth to clean the exterior column.

All bubble tubes require that the water in them be changed every 6–12 weeks (depending on the quality of your water supply) to slow the build-up of any bacteria. A shorter interval may be necessary, depending on your water supply. Additionally, BCB Solution (see below) should be added to slow the build-up of bacteria and/or algae.

Changing Bubble Tube Water

**Note:** We recommend wrapping a towel around the base of the clear column before removing the water. In the event of a spill, this offers a little extra protection against water entering the base.

To change the water in an Experia LED Bubble Tube follow these instructions.

1. Remove the lid off the column.
2. Use a length of hose (4 yards minimum for a 80” column) to siphon the water out of the column into a bucket. Empty the bucket and repeat.

**Tip:** To **make this process easier**, you can purchase an Experia pump-and-hose kit online at [www.experia-usa.com](http://www.experia-usa.com) and type “pump” into the search box.

You can purchase BCB Solution at our website by typing “BCB” into the search box.
