# Bubble Tube Pump & Hose Kit

For optimal results, please read and follow instructions carefully  
Please keep for future reference

**WARNING:** CHOKING HAZARD  
Small Parts: Not suitable for children  
under 3 years.

3+ years

Congratulations on the purchase of your Bubble Tube Emptying Kit.

The Bubble Tube Emptying Kit should allow you to decrease the time taken to empty the water within a bubble tube if used in accordance with these guidelines.

**Please be sure to read and follow these Instructions carefully before using this equipment. Please keep this manual for future reference.**

Pay attention to, and follow all warnings on the product and within this manual. If upon receipt of this product the user suspects that the product is defective and/or requires service or repair due to malfunction or damage, please contact the manufacturer immediately. Please be aware that improper installation and/or use or misuse of this product may result in injury, death, or adverse reactions to its user. This product is intended to be used only by adults familiar with these instructions. Failure to comply with these precautions or with specific warnings elsewhere in this manual violates safety standards of design, manufacture, and intended uses of the product.

## Features

- Heavy-duty pump with attached drainage hoses
- Easy maintenance
- Durable
- Easy to use
- 1 Year Manufacturers Guarantee (Collect and Return)

## Pack contents

1 x Bubble Tube Pump

1 x 12ft hose – attached to pump. This end goes into the bubble tube to empty it

1 x 5ft hose – attached to pump. This end goes into a bucket for draining.

## Getting Started

1. Remove pump and hose from packaging. Also, make sure you have a bucket before starting.
2. Switch power off to the bubble tube before proceeding. ***Make sure you unplug the transformer from the 110v AC outlet before proceeding!***
3. Remove the lid from the top of the bubble tube.
4. Place the short piece of hose into the bucket.
5. Place the long piece of hose into your bubble tube, down to the bottom.
6. Put the pump on the floor (or bubble tube platform if you have one) and repeatedly press the top of the pump with your foot. The water will now be pumped from the bubble tube. Once the flow of water starts, it will continue to syphon on it's own. If the bucket gets full before the bubble tube is empty, lift the hose out of the water in the bubble tube to stop the flow of water.
7. Dump the bucket, and repeat steps 5 & 6 until the tube is empty.

## Cleaning and Maintenance

- Make sure all water is removed from the pump and hose kit before storing.

## Changing Bubble Tube Water

- All bubble tubes require the water in them changed every 4 – 6 weeks to slow the build-up of any bacteria.
- **NOTE: Wrap a towel around the bubble tube column to prevent accidental dripping of water into the bubble tube base.**
